The Subaru EJ204 was a 2.0-litre horizontally-opposed (or ‘boxer’) four-cylinder petrol engine with double overhead camshafts, a variable valve timing system, and a six-speed manual transmission. The engine has been in production since 1995 and is used in a variety of Subaru models, including the Impreza and Legacy.

The EJ204 engine is known for its smooth power delivery and its ability to handle high levels of engine torque. It is also known for its longevity, with many Subaru owners reporting that the engine can go over 200,000 miles with little to no issues. However, like any engine, the EJ204 does require proper maintenance and care to ensure its longevity.

Some of the key features of the Subaru EJ204 engine include:

- **Horizontally-opposed design**: This design allows for a short engine with low friction, which results in enhanced fuel efficiency and improved performance.
- **Variable valve timing**: This feature allows for improved fuel efficiency and lower emissions.
- **Six-speed manual transmission**: This provides a wider range of gear ratios, allowing for better performance and fuel efficiency.
- **Robust construction**: The engine is designed to handle high levels of engine torque, which is especially important for applications such as rally cars.

Overall, the Subaru EJ204 engine is a reliable and efficient engine that has been well-received by many Subaru owners. With proper maintenance and care, it can provide years of reliable service.
